Sure. I sent an invite to put in on our calendars.

Interesting things w/ the CD so far. The short term limit is 2.4 lbs SO₂/ ton 100% sulfuric acid production. In 2009 they started up the new process and keep certifying in their progress reports that they continually meet that limit. But I've found several CEMS reports that are stating that the emission limit is 4 lbs/ton. Don't know if they ever changed the calculation in the CEMS system.

They also submitted an Operation & Maintenance (O&M) Plan that has never been approved by EPA but they say in the progress reports that they are following it. There is a section that talks about incidents and tracking of them. Gives us a spot to jump off of to investigate how they have handled their incidents.

(b) (7)(C), (b) (7)(C),

Can you set aside the afternoon of June 10th to meet with me in Dallas on Dupont? Thank you much.

Thank you,
